

## **INSTRUCTIONS: ALPHABET SETS**

Thankyou for choosing to purchase this file. Please message if you have any questions or issues. These instructions are general instructions that cover the alphabet sets.

### **File Options:**

- You have received letters as grouped files in SVG, PDF and DXF Formats.
- A JPG image of the letter set.
- A coloured version in ai (adobe illustrator) this is useful for providing mockups if customers would like to see a certain name. Note: this is not available for all sets but I am working through the process of adding this extra feature.

### **Cutting Options:**

- All of the internal components of the letters are mostly connected. This means a simple cut with no searching for pieces. Note: That the Under the Sea set has a few layers where the centre of the letter may not be connected such as in B or P
- The Under the Sea & Wildflower sets are both 2 layered (+ additional backing layer) This gives added depth to the letters. You can choose to only use 1 layer if you prefer. I like to use these sometimes without the backer.

### **Resizing:**

- Please select the letters you wish to cut, then resize by selecting all the letters. Most of the letters can be cut down to 3 inch in height easily. The most common size people use is around 6-7 inch in height.

### **Options:**

- You can use the letters with or without the backers
- You can also decide to leave the top layer as just the frame or you can put all the cut out pieces back in such as in the space, floral rose, rainbow clouds and unicorn horn sets.
- The letters look great as childrens wall names but can also be used as large single letters. You can also treat them as a monogram and add a layered name across a large letter.
- There are so many other ideas for these so please make sure you share and if possible we really appreciate you taking the time to leave a review.

Happy making, Peta
